This course provides

2 CE Credits

Approved PACE Program Provider FAGD/MAGD
Credit Approval does not imply acceptance by
a state or provincial board of dentistry or AGD
endorsement. June 1, 2013 to May 31, 2016.

Keeping up with changes and new discoveries in periodontal research can be a difficult task. Once it was easy to stay informed when new findings were reported every 10–15 years. Today, new information is estimated to double every four to five years. Couple this with research that has concluded that the prevalence of periodontal disease may have been underestimated by as much as 50 percent, and the implications are clear - we need a better understanding of this disease and the options for treatment.

Specific Topics to be addressed in this seminar:

- Diagnosis of Periodontal Disease
- The Oral-Systemic Connection
- Options for Treatment
- The clinical applications of commercially used laser systems based on their working wavelengths
- Laser Assisted New Attachment Procedure (LANAP)
- Laser treatment for peri-implantitis (LAPIP)
- Evaluating the Success of Treatment
