

The Management of the Posterior Maxilla

Tricia Crosby, DDS, MS, Martin Kolinski, DDS, William Trahan, DMD, MSD

Improvise, adapt, and overcome. We have all faced challenges over the past 6 months due to the Coronavirus. While we have decided to postpone our annual in-person fall seminar, we would still like to bring you valuable educational content so that we can all continue to learn together. We will be offering a series of 1-hour webinars each reviewing a different topic. The first will be the ***Management of the Posterior Maxilla.***

We Will Discuss:

- ▶ History, background, and treatment approaches for managing the posterior maxilla
- ▶ The crestal sinus lift: what types of cases can be managed with this approach?
- ▶ Principles that guide our treatment, restorative compromises, and our philosophy on socket grafting in this area.

September 28th, 2020

6 - 7 pm
