## Demystifying Bone Grafting: Current Philosophies, Techniques, and Materials

---

There are situations where limited bone volume hinders our ability to restore the form, function, and health of a patient utilizing dental implants. Bone grafting allows us to preserve or recreate the “foundation” for dental implants, in order to create long lasting esthetic and functional results. This year’s seminar focuses on the many techniques, materials, and staging needed to obtain optimum results as well as when these procedures are most appropriate.

### Why you shouldn't miss this seminar:

- ▶ Your patients *trust you...* and will look to **YOU** for advice regarding any number of dental procedures.
- ▶ This seminar is designed to inform you of the whys and wherefores of bone grafting.

# Fall 2018 Dental Hygiene Seminar
