Situations and Solutions: Specialized Treatment Options to Productively Address Daily Clinical Challenges

COURSE DESCRIPTION

For today's implant patient, the final outcome and long term success depends on team treatment planning and communication with a multi-disciplinary approach. Determining the most ideal surgery and prosthesis can provide many benefits toward esthetics and function. A review of site preparation, soft and hard tissue management, abutment selection, lab and clinical procedures for the various types of restorative options will be provided. The discussion will focus on the products and procedures available to help bring simplicity and reliability to the entire process. This presentation will encompass the role of diagnosis and treatment planning for achieving optimal results with emerging technologies such as optical and intra-oral scanning. Additionally, new concepts for edentulous patients will be explored.

At the completion of this course, participants will be able to:

- Improve the clinical outcome of even the most complicated implant case.
- Recognize the available options to predictably treat the single-tooth, narrow diameter, and edentulous patient.
- Increase profitability by simplifying implant treatment protocols and providing optimal results using new technologies in the planning and surgical phases.
- Integrate patient-specific abutments with the use of CAD/CAM technology for both provisional and more definitive restorations.

REGISTRATION/INFORMATION

To register or request more information, contact:
Mary Jean Kelly at 262-240-9840 or
office@burkeperio.com.

When registering by email, please include your full name, complete address, phone number and NPI number.

Please respond by Friday, March 31, 2017 as space is limited.

Your local DENTSPLY Implants representative:

Ryan Jones | 262-309-5205
